

CAEI | [China Architectural](#) | **Profile** | **Summary**

China Architectural Engineering - CAEI -,engages in the design, engineering, fabrication, and installation of curtain wall systems, roofing systems, steel construction systems, eco-energy saving building conservation systems, and related products for public works and commercial real estate projects.

Unlike in the USA, the new housing construction in China is expected to grow for the near future due to the massive rapid migration of rural population.

We believe **CAEI** will continue to benefit from the domestic market as well its increased overseas presence. The stock should be on your watch list.
